

# Xcel Green Button — SAML SSO Support Request

To:

greenbuttonsupport@xcelenergy.com

Subject:

SAML SSO blank page — Service Provider Client ID 9dcf7385177c67119581

Body (copy and paste this in your email client):

Hello Green Button team,

I'm Yoandy Ross from Ross House Rentals LLC. Our Service Provider integration is fully configured and the smoke tests pass:

- GET /ApplicationInformation/e4d0930e-7cd4-5290-a207-5b8de92fe9f0  
-> HTTP 200 (returns valid Atom XML)
- GET /ReadServiceStatus (client\_credentials, scope FB=34\_35)  
-> HTTP 200 (returns valid Atom XML)

However, when a customer clicks the OAuth authorization link:

```
https://myenergy.xcelenergy.com/greenbutton-connect/gbc/espi/1_1/oauth/authorize
?response_type=code
&client_id=9dcf7385177c67119581
&redirect_uri=https://rosshouserentals.com/tenant/utilities?callback=greenbutton
&state=...
&scope=FB=4_5_15_16_18_19_31_32_33_34_35_36;IntervalDuration=900;BlockDuration=monthly;HistoryLength
```

They are redirected to your SAML SSO endpoint (wsservices.xcelenergy.com) which returns a BLANK PAGE - no login form, no error. Tested on Safari iOS, Chrome desktop, Chrome incognito - all show blank.

Could your team please:

1. Confirm the SAML configuration for our Service Provider is active
2. Verify wsservices.xcelenergy.com SSO is reachable from external clients
3. Check whether our customer-facing scope string requires a different format

The redirect\_uri registered on our end is exactly:

```
https://rosshouserentals.com/tenant/utilities?callback=greenbutton
```

Application ID: e4d0930e-7cd4-5290-a207-5b8de92fe9f0

Client ID: 9dcf7385177c67119581

Service Provider name: Ross House Rentals LLC

Thanks for your help,
